                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CA-----CCCTGAACTTCCCCCAGAICACCCTGTGGCAGCGCCCCCTGGTGAGCATCAA 416
                                                                                                                                                                                                                                                  WES-U1: 3

9 US-09-936-572-14

i Sequence 14, Application US/09936572

i Patent No. 6783381

i GENERAL INFORMATION:

APPLICANT: UDEN, WARK

APPLICANT: WITTOPHANOUS, KYRIACOS

I TITLE OF INVENTION: ANTI-VIRAL VECTORS

FILE REFERENCE: 078883/0137

CURRENT FILING DATE: 2000-12-11

PRIOR APPLICATION NUMBER: US/09/936,572

CURRENT FILING DATE: 2000-03-17

PRIOR FILING DATE: 1999-03-17

PRIOR FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 73

SEQ ID NO 14

LENGTH: 4327

TYPE: DNA

OTHER INFORMATION: Description of Artificial Sequence: PEATURE:

COTHER INFORMATION: sequence of HIV-1 gagpol with 20bp of the leader US-09-936-572-14

/note="Vector: TOPO-PCR4; DNA flanking Mu transposon
insertions in Mu inactive lines were extracted from the
UniformNu maize population by the thermo assymmetric
interlaced PCR (TAIL) protocol using primers specific for
the Mu terminal inverted repeat and a set of 16 arbitrary
primers. Amplicons were size enriched using Sepharose 400
spin columns and cloned into the TOPO PCR4 vector."

This sequence is the direct result of the Base calling software
Phras equence is the direct result of the Base calling software
Cdefault parameters). It is the raw base calls. To aid in the
identification of the high quality insert the software Lucy
(default parameters) has been run on this sequence. Lucy identified
the region [128,636].
Plate: Tail537 row: N column: 23.
